Submission for Microsoft Code; Without Barriers Hackathon 2023

PROBLEM STATEMENT

GitHub Problem #2:

Markdown alt text suggestor – GitHub Action that can be enabled by a maintainers to scan markdown documents looking for inline images missing alt text and suggesting them.

This can be run as part of a PR pre-merge check or periodically on the codebase to help improve the accessibility of a project documentation set.

INSPIRATION

What inspired me to choose this problem statement?

Enhanced Social Inclusivity

Ensuring accessibility and independence for visually impaired readers

Release for Open-Source

Creating a product that is ready to be released to the public for share or use

Improved SEO (Search Engine Optimisation)

Provide context/description for Search Engine Crawlers, hence better visibility of your project online

SOLUTION:

AltSuggestor

A simple yet game-changing, automated Markdown alt text suggestor.

With AltSuggestor, you can now enhance both social inclusiveness and web accessibility of your project.

GitHub Action

to automate the whole process

Markdown to HTML conversion

 tag alt attribute determine whether alt text exists

Azure Cognitive Service API

capture image features and generate image caption

Why use AltSuggestor?

Fully Automated, So Simple

0-1M images **\$1** per 1,000 transactions

1M-5M images **\$0.80** per 1,000 transactions

5M+ images \$0.65 per 1,000 transactions

Higher SEO, Higher Visibility, Higher Profits

Doing good, making a difference for the visually impaired
